

# LOCOMOTIVE BLAST KILLS 13

## Here and There

Editorial By ALEX. H. WASHBURN

HAL NORWOOD'S proposal to run a constitutional amendment through the legislature next month granting tax exemption to Arkansas homesteads under \$2,500 assessed valuation is well-intentioned—but it won't work. There is a method, however, that will work.

### Census-Takers in Hempstead Named for 12 Townships

Wash Hutson Announces Distribution of Enumerator Territories

#### 1935 FARM CENSUS

To Check Up on Drouth and Panic Effects on Farm Population

Township census-takers for Hempstead county in the federal government's 135 farm census were announced in Hope Thursday by Wash Hutson.

Hempstead county is in the district having census headquarters at Camden.

The purpose of the special farm census, midway between the regular census years 1930 and 1934, is to check up on the effects of such extraordinary events as drouth and panic upon the farm population of the United States.

Hempstead census-takers, and the townships assigned them, are as follows:

Wash Hutson: All of DeRoan township north of the Missouri Pacific railroad; and all of Water Creek township.

Will Gentry: All of DeRoan township south of the Missouri Pacific.

Luther Rider: All of Bodewau township.

Joe Porterfield: All of Spring Hill township.

W. J. Anderson: South part of Bois d'Arc township.

W. H. Parker: North part of Bois d'Arc.

Claud White: South and west part of Saline.

J. F. Stuart: Southwest part of Ozark.

Bernard Webb: South part of Ozark.

Monroe Samuels: Garland and Nolan.

Mrs. Ira Hendrix: Wallaceburg.

Luther Compton: Redland.

H. E. Robins: South part of Mine Creek.

Orin Hyatt: North part of Mine Creek.

### 42 Negro Families Given Xmas Cheer

Meat, Lard, Flour Distributed by Negro Goodfellows Club

Forty-two negro families of Hope received Christmas gifts from the negro Goodfellows club, W. L. (Shorty) Holbert, chairman of the club, reported Thursday.

The gifts consisted of meat, lard, flour, beans, peas, apples, oranges, candy, rice and coffee.

Funds contributed to the club totaled \$45.04, or \$5.04 over the quota. The chairman expressed thanks for the public contributions.

Libby, Italy's colonial possession in Northern Africa, is more than twice the size of the state of Texas, previous to flame.

### FLAPPER FANNY SAYS:

REG. U. S. PAT. OFF.

Life's a mad whirl if you're angry at your dancing partner.

### \$17,307 in Parity Checks Received for This County

1,241 Checks to Be Distributed Here Early Next Week

TO BE GIVEN NOTICE  
Cards Will Be Mailed Each Farmer, Giving Instructions

According to Frank R. Stanley, county agent, 1,241 parity checks, totaling \$17,307.09, have been received and will be delivered the first of next week.

There are 1400 checks yet to come. Cards will be sent to each man receiving a check telling him when and where to come for his check. All contract signers are asked to co-operate with the county agent so that the checks may be handled in a more efficient manner.

Each tenant in the county is to receive his share of the parity check. The half hand will receive one-half of the parity and the third and fourth man will receive three-fourths of the check.

The parity is based on "Farm Allotment," and the "Farm Allotment" is 40% of that figure, expressed in pounds, which results from multiplying the average number of acres planted in cotton on this farm during the base period, as given in 1934-35 Contract, by the average yield, expressed in pounds, per acre during such period.

An example:  
Using 200 pounds as average yield  
per acre  
60 x 200 = 12,000  
40% of 12,000 = 4,800 pounds  
4,800 x .01 per pound = \$48.00 parity payment.

A schedule for delivering checks will be printed in tomorrow's paper.

The Arkansas Gazette hints at what would happen under a homestead exemption law, with these words:

Any one can think of many a county where a homestead property assessed for more than \$2,500 is a rare exception. And of course there would be unending pressure on assessors to pare down valuations to bring them within the exemption limit.

As every thinking citizen knows, a homestead exemption law would merely complete the wrecking of an assessing system which already favors the rich against the poor.

What I mean is: The man with a little property can hardly escape the property tax law, because what he has is small and plainly in view; but the rich man has much, some of it hard to find, and he can beat the law if he wants to—and frequently does.

Homesteads should be exempt from taxation—yes.

But there are plenty of other things we have to do first.

The state has to find money for the schools, perhaps a sales tax, with a reduction in the property tax following immediately afterward.

Right here at home we have a tax problem.

Nobody knows how many thousands of dollars of personal property escapes the Hempstead county taxbooks every year.

The Hempstead Quorum Court meets again next month. It ought to do this.

It ought to vote a special appropriation of several hundred dollars, hire some outstanding local business man, who knows the true facts about our city and county taxpayers, and have him go down the line with the Board of Equalization to put all this missing personal property on the taxbooks.

Half our school problems are due to the fact that local government puts up with an appraisal and collection system that would put a private concern out of business.

### Color Photos Aid Medical Studies

Infra-Red Rays Penetrate Human Body as They Penetrate Fog

PITTSBURGH, Pa.—(AP)—First photographs of germs and blood cells in their natural colors—colored pictures of the invisible that give doctors a speedy new aid to diagnosing and studying diseases—were exhibited Wednesday to the American Association for the Advancement of Science.

Another feat, penetrating the human body to photograph both disease conditions and the progress of treatments with infra-red rays, the same kind used recently to make airplane photos of cities and other distant objects through obscuring haze, was shown in the same exhibit, sponsored by the Biological Photographic

### Cold Wave Here Proves Dud; Rain Sweeps the State

39 Below Zero in Minnesota—Low in Hope Is 34 Degrees Above

THIRD OF INCH RAIN  
Sub-Zero Temperatures and Snow Blast All the Northern States

The Weather Man's official forecast of low temperatures of 20 to 24 degrees for Wednesday night with clear and cold weather for Thursday, failed to materialize.

The lowest reading for Wednesday night was 34. Thursday's forecast of clear and cold weather turned into rain Thursday morning with slightly rising temperatures.

Rainfall up to noon Thursday had totaled .32 inches, the Fruit and Truck Branch Experiment station reported.

The weather forecast for this area Thursday night was: Cloudy, probably rain Thursday night and Friday; warmer Thursday night.

By the Associated Press

Winter launched its bitterest assault of the season on the midcontinent Wednesday. A cold wave swept into the upper Rocky Mountain region from Canada, moved across the North-west down on the Middle West and then South and East.

Minimum temperatures below zero included:

Elkville, Minn., 39; Bemidji, Minn., 37; Devils Lake, N. D., 34; Duluth, 26; Waukegan, S. D., 20; Minneapolis and St. Paul, 18; Havre, Mont., 18; Mason City, Ia., 15; Sioux Falls, S. D., 12.

The thermometers in these places ventured upward during the day but forecasters warned states east of the Mississippi to prepare for the cold wave.

The Weather Bureau at Chicago predicted the mercury would shrink to 10 below zero in Chicago suburbs during the night. But the Central station was promised relief Thursday. It was three above in Chicago Wednesday.

Roads Blocked

Snow blocked many secondary roads in the northern Midwest. Many low-lying were forced to abandon their cars. Communications lines snapped at scattered points in Minnesota. Four persons were frostbitten before they were rescued from an isolated road near Albert Lea, Minn., with the temperature at 12 below zero.

Telephone wires were also affected in Western Canada. There the mercury dove to 30 below at Calgary, 39 at Edmonton, 37 at Regina, 35 at Saskatoon, 25 at Winnipeg and 46 at Prince Albert. Coal prices in the provinces soared. A farmer at Dunblane, Sask., froze to death as he attempted to walk a half-mile. Another met the same fate at Winnipeg. Several other deaths were attributed to the cold in that area.

Curtailment of receipts gave a sharp fillip to livestock and provision prices.

### U.S. Intervenes in Shank Sanity Plea

Federal Court Reprive 48 Hours Before Scheduled Execution

LITTLE ROCK.—Less than 48 hours before he was scheduled to die in the electric chair for murder, Mark H. Shank, Akron, (Ohio) attorney was granted a reprieve Wednesday when Federal Judge Martineau temporarily stayed execution.

A writ of habeas corpus and a temporary restraining order were issued by Judge Martineau, preventing prison officials from carrying out a proclamation by Governor Fulton ordering Shank executed Friday. The writ and order were served early Wednesday night on Supt. S. L. Todhunter of the state prison farm.

The petition filed charges that Shank has been denied his rights under Section 1 of Article 14 of the Constitution of the United States, which provides that no person shall be deprived of "life or liberty" without due process of law, and that he has been refused a sanity hearing by Superintendent Todhunter. It also alleged that that threat of mob violence made at that time prevented him from receiving a fair and impartial trial. Lawyers for Shank said that armed guards with machine guns were stationed at the courthouse during the trial, and that members of the jury entered and left the courthouse under armed guard and under circumstances which evinced and intimidated them and prevented proper consideration of the question of Shank's sanity. Decisions in cases involving race riots at Elaine

### Hauptmann and the Witnesses

Betty Gow

Dr. John F. Condon

This new picture of Bruno Hauptmann reveals how ill he is. The Flemington, N. J., jail has agreed with him. Gone are the haggard lines that marked him during his fight against extradition from New York. His shrewd, alert attention distinguished his court appearance to force the prosecution to stipulate charges they will make in his trial.

### Hot Springs Sisters Slain in Murder and Suicide Pact

Older Sister Shoots Younger One, Then Kills Self, in Bedroom of Home

HOT SPRINGS, Ark.—(AP)—Two sisters, members of a prominent family, were found shot to death in a bedroom of their home here Thursday.

Coroner Randolph pronounced the tragedy a murder and suicide, and said Miss Christine Burroughs, 27, shot her favorite sister, Clara, and then turned the gun on herself.

Members of the Ed H. Burroughs family heard the shots and found the body of the older girl on the floor, the pistol clutched in her hand.

The younger girl was in bed and was not discovered to be shot until after officers arrived.

The coroner quoted the family as saying the older girl had suffered a nervous breakdown.

### Ford Dealers at Memphis Preview

Hope Auto Co. Staff at Branch Thursday to See 1935 Models

Hope Auto Company, Ford dealer, are represented as more than 1400 Ford dealers, their bankers, Ford salesmen and newspaper men from six states gathered in Memphis Thursday for a special pre-showing of the sensational new 1935 Ford V-8 car, which will launch the Ford "One-Million-Car" program for 1935.

Those from here who are attending are: Thos. F. McElwain, T. Urrey, John Gaines, Frank Walters.

The meeting is directed by W. F. Duckworth, Memphis branch manager, and will be one of the largest automotive gatherings ever staged in Memphis and the Mid-South. It is one of 45 similar meetings being held simultaneously throughout the United States and Canada.

To each meeting, over a special long distance telephone hook-up, directed from Detroit, Michigan, will come the voices of Henry Ford, Edsel Ford, and other leaders in the Ford organization.

More than 50,000 persons in these meetings in the United States and 25,000 in Canada will hear them.

The entire Mid-South will be represented at the Memphis meeting. Dealers, bankers, newspaper men and salesmen will converge on Memphis from points in Arkansas, Missouri, Kentucky, Tennessee, Mississippi and Alabama.

On Saturday December 29, in their home cities they will inaugurate the "One Million-Car" program, which national business leaders expect will play a very important role in national recovery in 1935.

### Reserve Head in Answer to Glass

Glass Retorts He Understands the Law—He Helped Write It

WASHINGTON.—(AP)—Marriner S. Eccles, governor of the Federal Reserve Board, Wednesday night denied the recent allegation of Senator Carter Glass, Democrat, Virginia, that his order reducing time and savings interest rates of member banks was illegal.

Glass, in a letter to Charles S. Holloman, member of the Reserve Board, asserted that the Federal Reserve Board and the Federal Deposit Insurance Corporation and "usurped" the power of congress by including member banks in the interest-reducing order.

Eccles said the action was taken in accordance with the provision of the

### Miners Blown to Bits in Disaster in West Virginia

43 Critically Hurt as Explosion Caves in Forward Car

### 100 MEN IN COACH

All Are Injured—2 Enginemen Killed in Train Wreck in Ohio

MONTGOMERY, W. Va.—(AP)—Thirteen men were killed and at least 43 injured Thursday in the explosion of the boiler on a locomotive drawing a train loaded with miners en route to work.

About 100 men were riding in the first coach, and nearly all were hurt. The blast was said to have been caused by the buckling of a fire-box cover and the subsequent loosening of the boiler tubes.

Pieces of the locomotive were blown 100 yards away, injuring many workers as they fled from the wreckage.

Hospital officials said they feared many of the injured would die.

### 2 Die in Ohio Wreck

COLUMBUS, Ohio.—(AP)—Two trainmen were killed when a passenger train sped onto a siding and crashed into a string of freight cars here Thursday.

F. H. Frick, superintendent of the division, blamed vandalism for the wreck.

### Japs Notify British Treaty Is at End

Formal Denouncement to Be Made at Washington This Saturday

LONDON, Eng.—(AP)—The Japanese unofficially notified the British Thursday that the Tokyo government would denounce the Washington naval treaty of 1922 Saturday at Washington.

In the meantime, the British, American and Japanese delegations have begun a final study of the naval situation, although the tri-power conversations officially ended last week.

### France Will Not Give Up Trotsky

Exiled Russian Leader Protected From Vengeful Soviet Chiefs

PARIS, France.—(AP)—French officials said Thursday that Leon Trotsky, exiled former Communist leader, is safely hidden in France and "even if the Soviets ask for his extradition he will not be surrendered."

### Stamps Quartet at Patmos on Saturday

Virgil O. Stamps and his party will give a concert at Patmos Saturday night, December 2, Wash Hutson announced in Hope Thursday. Proceeds will go to the Patmos school. The Stamps quartet is one of the best known now on the road.

### Municipal Health Insurance Planned

Canadian Town Will Try Two-Year Experiment by Taxation

WINNIPEG, Manitoba.—(AP)—The Manitoba Department of Health, selecting the municipality of Woodworth with its 2,000 population as its laboratory contemplates a two-year practical test of health insurance scheme.

Scheduled to get under way in the spring if the municipal council votes its approval, the plan provides:

A complete medical service, including surgery, hospitalization and cost of prescriptions.

Payment of doctors' fees and hospital charges through taxation on property and a poll tax.

Right of the individual, within reasonable limits, to choose his own physician or surgeon and select the hospital to which he desires to go for treatment.

Maintenance of competition between doctors, continuance of the high standard of medical care and protection against racketeering by doctors.

"There will be nothing compulsory about the scheme," said Dr. F. W. Jackson, deputy minister of health, who framed the plan.

## YOUR HEALTH

By DR. MORRIS FISHER  
Editor, Journal of the American Medical Association, and of Hygiene, the Health Magazine

New Serum, Gland Extracts and Drugs  
Advance Medical Science

Probably the most significant aspect of medical work in 1934, particularly in the United States, was the increasing attention given by the medical profession and by the social scientists to the problem of greater application of medical care to more people.

This interest culminated in the appointment by President Roosevelt of a medical advisory board with a technical advisory staff. These are to give to the President's Committee on Medical Security suggestions as to the best means of providing all the people with suitable medical care.

From the point of view of public interest, the most significant occurrence of the year was the birth and successful rearing of five baby daughters of Olivia Dionne near Corbell, Ont., under the care of Dr. A. R. Dufour.

This is the first record of such an occurrence in the history of medicine. Quintuplets have been born previously, but never successfully reared for as long as six months.

The Nobel prize award in medicine for 1934 went to three Americans—Dr. Minot, Murphy, and Whipple—for their researches leading to establishment of the fact that liver and liver extracts will save the lives of persons with pernicious anemia, a condition formerly considered fatal.

The most important epidemics of the year were infantile paralysis in California, which affected some thousands of people and waned with the coming of cold weather; dysentery, affecting cities in New Jersey; and amebic dysentery, which originated in Chicago.

Perhaps the most important single medical observation was the determination of the existence in the human body not only of hormones, or glandular principles which affect growth and function of the body, but also of hormones, which limit the action of the hormones.

There is thus a constant attempt within the body to balance its activities.

The rise of infantile paralysis, one of the most feared diseases affecting human beings, led to greater research for methods of prevention and treatment. Already centers have been established for collection of blood serum from persons convalescing from this disease. Such serum is believed to have merit in control of the disorder.

Anticipating the return of another great epidemic of influenza, investigators throughout the world continue search for the causative agent and some specific method of prevention.

Serums to control epidemic brain fever, called sleeping sickness, were announced, but are still to be suitably evaluated. Investigators also announced serums said to be effective against the bite of the black widow spider, modifications of the serums used against a venereal disorder.

At the same time, work leading toward development of active principles from various glands, probably held the center of interest. In Philadelphia, L. G. Rowntree announced use in animals of an extract of the pineal gland developed by Dr. A. M. Hanson of Minnesota. This extract produced normal size in dwarfed rats. The work seemed to show that stature and early growth depend on maintenance of a proper balance between thymus and pineal glands.

Active principle of the cortex of the adrenal gland was studied in many institutions of research and this active principle, called cortin, was obtained in pure crystalline form. Its chief use is in cases of deficiency of the adrenal gland brought about sometimes by tuberculosis and resulting in the heretofore fatal condition called Addison's disease.

Greatest attention in the glandular field was devoted to a substance found in the excretion from the kidneys of pregnant women. This substance has remarkable effects in the human body. For instance, it caused the descent of the sex gland in small boys, when for some reason that step in the process of growth was delayed.

Several investigators found relationship between this substance and growth of certain forms of tumor. Altogether, however, research on the nature and causes of cancer did not advance rapidly during 1934.

Of special significance in the field of nutrition was isolation in pure form of some of the vitamins and improvement in quality of other vitamin preparations.

From the point of view of nutrition it was found that certain forms of disease in which there is great muscle weakness might be benefited by use of a substance called glycine, and that high protein feeding in general was beneficial in such cases.

In control of overweight, a new diet, based largely on the eating of bananas and skimmed milk, attracted much attention.

Sensitiveness of persons to various food substances continued to arouse great interest. But special attention was paid to the widening use of cottonseed oil and other cottonseed products with the development of sensitivity to such substances.

Another exceedingly toxic substance was uncovered in the form of pyridine, or amidopyrine. Some people apparently are sensitive to this substance and respond to its ingestion with a sudden drop in the white blood cells.

During 1934.

Of special significance in the field of nutrition was isolation in pure form of some of the vitamins and improvement in quality of other vitamin preparations.

From the point of view of nutrition it was found that certain forms of disease in which there is great muscle weakness might be benefited by use of a substance called glycine, and that high protein feeding in general was beneficial in such cases.

In control of overweight, a new diet, based largely on the eating of bananas and skimmed milk, attracted much attention.

Sensitiveness of persons to various food substances continued to arouse great interest. But special attention was paid to the widening use of cottonseed oil and other cottonseed products with the development of sensitivity to such substances.

Another exceedingly toxic substance was uncovered in the form of pyridine, or amidopyrine. Some people apparently are sensitive to this substance and respond to its ingestion with a sudden drop in the white blood cells.

Since these white blood cells are related definitely with overcoming infection, the body resistance breaks down when the number of white blood cells drops and death frequently ensues. Tannic acid, valuable in the treatment of burns, was found useful also in the treatment of various forms of bed sores and ulcers. There was believed to be generally a definite relationship between intake of certain vitamins and the prevention of stones in the kidney.

A new antiseptic called phenyl mercuric nitrate was found of special value in treatment of infections with fungi, such as the ringworm that causes athlete's foot. Another chemical substance, sodium formaldehyde sulfoxylate, was found to be an efficient antidote for mercuric poisoning.

In the surgical field, special attention was paid to operations for the relief of high blood pressure of unknown origin, one of these operations consisting of cutting of the nerve roots in the spine and another of dissecting the ganglia of the adrenal glands.

Much attention was paid also to operations on the thyroid gland so as to take strain and push off the heart.

Improvements for studying changes which go on in the body and also in surgical technique were developed in profusion. New devices for illuminating internal organs and a thermometer so delicate that it can measure changes in temperature between inhalation and exhalation of a single breath were a few of the interesting announcements.

Again it should be pointed out that diseases change exactly as human beings change. A form of anemia called chlorosis, extremely prevalent 100 years ago, has practically disappeared. Epidemic diarrheas in children are disappearing, due to improved methods in infant feeding and control of infection.

Perhaps because of increasing sobriety, cirrhosis of the liver is becoming rare. Such infectious diseases as yellow fever and plague have been stamped out of the United States, and malaria and pellagra appear in only a few places.

Among the great physicians who died during 1934 was Dr. William H. Welch, a medical investigator, teacher and founder of medical institutions, known as one of the original four professors, including Sir John Hopkins University School of Medicine.

Another important loss in medicine was the death of Dr. Theobald Smith, of the Rockefeller Institute, who first proved that insects spread disease.

Finally, a notable feature of the year was the award of a citation by the American Legion to Drs. William J. and Charles H. Mayo. The citation was presented by President Roosevelt, who took occasion to pay tribute to the advancement of medical science and the development of the American medical profession.

## A BOOK A DAY

By BRUCE CATTON

If You Would Tour Beyond the Stars—Sir James Jeans Will Guide You in This New Book

If you care to go a personally conducted tour of the earth, the sun, the moon and all the stars, you can hardly find a better guide than Sir James Jeans; and this scientist's latest book, "Through Space and Time"—makes such a tour available on highly attractive terms.

In some ways this book is just about the best of all popularizations of modern science, because it is so exceedingly simple. Its author has an uncanny knack for bringing the most abstruse subjects down to the level of a fifth-grader's comprehension, and many a reader who has bogged down hopelessly on other scientific expositions will find this one lucid and intelligible.

Sir James begins by reviewing the history of the earth, speculating as to its age—his guess is two billion years, more or less—and outlining what is known of its origin and development. Then he leaps to the moon, examines that lump of lifeless rock, proceeds to the sun, visits each of our planets—and, at last, takes off on a dazzling tour of the incomprehensible vastnesses of the outer universe.

There are so many stars, he remarks, that if they were pro-rated among the earth's inhabitants, each of us would have at least 100. The universe is expanding; perhaps it is exploding, perhaps it is drifting down a stream of space which alternately flows between narrow and wide banks.

We can be sure of very little; but we can make some soul-stirring speculations.

All in all, a very fine book. Published by Macmillan, it costs \$3.

Modernism Can't Justify Obscenity.

Quoting from a letter written by a worried mother: "I am asking you for advice which will help many and be appreciated."

"I live in a small town where there are many children. It seems that some children come from homes where uncouth topics are openly discussed, therefore the girl of five and boy of three say and do the most shocking things. I am so worried because my little girl of less than three is learning some terrible things. I wash out her mouth but hate to whip her because she does not know what she says."

Have appealed to some of the parents, but they laugh and call me old-fashioned. Is it necessary for little tots to know such things? Please tell me what you think and many thanks."

Well—this is what I think. It is puzzling and pitiful that anyone thinks it modern and smart to allow children to become obscene—if children can be obscene—under the pretense of candor and truth.

Difference in Knowledge

There is all the difference in the universe between the sober and wholesome knowledge and acceptance of biological facts and the twisted ideas of life that tots and immature children learn from street talk or even in their homes, if parents have not made a serious study about the matter of informing them.

Furthermore, much as I believe in the very gradual and absolutely decent enlightenment of the young, it must be emphasized that the approach to such things must be in accordance with the child's ability to comprehend without shock or warping. At different ages he is ready for new things.

The child is to be pitied who is suddenly doused with the whole story. What will he do with it? Just what he will do with anything else. Make play of it according to his disposition.

The whole subject should begin with the simplest ABCs, just as any other subject.

How to Approach Topic

The mother would do well to make a study of approach and use the simple examples of nature around her. The daddy and mother idea in all natural life is accepted first. The unit of the family next and the mother's breath and exhalation of a single breath were a few of the interesting announcements.

Again it should be pointed out that diseases change exactly as human beings change. A form of anemia called chlorosis, extremely prevalent 100 years ago, has practically disappeared. Epidemic diarrheas in children are disappearing, due to improved methods in infant feeding and control of infection.

Perhaps because of increasing sobriety, cirrhosis of the liver is becoming rare. Such infectious diseases as yellow fever and plague have been stamped out of the United States, and malaria and pellagra appear in only a few places.

Among the great physicians who died during 1934 was Dr. William H. Welch, a medical investigator, teacher and founder of medical institutions, known as one of the original four professors, including Sir John Hopkins University School of Medicine.

Another important loss in medicine was the death of Dr. Theobald Smith, of the Rockefeller Institute, who first proved that insects spread disease.

Finally, a notable feature of the year was the award of a citation by the American Legion to Drs. William J. and Charles H. Mayo. The citation was presented by President Roosevelt, who took occasion to pay tribute to the advancement of medical science and the development of the American medical profession.

Since these white blood cells are related definitely with overcoming infection, the body resistance breaks down when the number of white blood cells drops and death frequently ensues. Tannic acid, valuable in the treatment of burns, was found useful also in the treatment of various forms of bed sores and ulcers. There was believed to be generally a definite relationship between intake of certain vitamins and the prevention of stones in the kidney.

A new antiseptic called phenyl mercuric nitrate was found of special value in treatment of infections with fungi, such as the ringworm that causes athlete's foot. Another chemical substance, sodium formaldehyde sulfoxylate, was found to be an efficient antidote for mercuric poisoning.

In the surgical field, special attention was paid to operations for the relief of high blood pressure of unknown origin, one of these operations consisting of cutting of the nerve roots in the spine and another of dissecting the ganglia of the adrenal glands.

Much attention was paid also to operations on the thyroid gland so as to take strain and push off the heart.

Improvements for studying changes which go on in the body and also in surgical technique were developed in profusion. New devices for illuminating internal organs and a thermometer so delicate that it can measure changes in temperature between inhalation and exhalation of a single breath were a few of the interesting announcements.

Again it should be pointed out that diseases change exactly as human beings change. A form of anemia called chlorosis, extremely prevalent 100 years ago, has practically disappeared. Epidemic diarrheas in children are disappearing, due to improved methods in infant feeding and control of infection.

Perhaps because of increasing sobriety, cirrhosis of the liver is becoming rare. Such infectious diseases as yellow fever and plague have been stamped out of the United States, and malaria and pellagra appear in only a few places.

Among the great physicians who died during 1934 was Dr. William H. Welch, a medical investigator, teacher and founder of medical institutions, known as one of the original four professors, including Sir John Hopkins University School of Medicine.

Another important loss in medicine was the death of Dr. Theobald Smith, of the Rockefeller Institute, who first proved that insects spread disease.

Finally, a notable feature of the year was the award of a citation by the American Legion to Drs. William J. and Charles H. Mayo. The citation was presented by President Roosevelt, who took occasion to pay tribute to the advancement of medical science and the development of the American medical profession.

Active principle of the cortex of the adrenal gland was studied in many institutions of research and this active principle, called cortin, was obtained in pure crystalline form. Its chief use is in cases of deficiency of the adrenal gland brought about sometimes by tuberculosis and resulting in the heretofore fatal condition called Addison's disease.

Greatest attention in the glandular field was devoted to a substance found in the excretion from the kidneys of pregnant women. This substance has remarkable effects in the human body. For instance, it caused the descent of the sex gland in small boys, when for some reason that step in the process of growth was delayed.

Several investigators found relationship between this substance and growth of certain forms of tumor. Altogether, however, research on the nature and causes of cancer did not advance rapidly during 1934.

## The Latest Water Power Project

**Lovable**

By MARY RAYMOND  
© 1934 NEA SERVICE, INC.

**BEGIN HERE TODAY**  
ANN HOLLIESTER, pretty and 20, breaks her engagement to TONY KENDALL, commercial artist, because of his drinking and general irresponsibility. The same day PETER KENDALL, wealthy and prominent, learns how VALERIA BENNETT, his fiancee, has deceived him and tells her everything is over between them.

Ann and Peter, both heart-sick and disillusioned, meet and discuss their mutual unhappiness. When Peter asks Ann to marry him she agrees.

They go to Florida and spend several weeks happily. Then Peter is called home because of business. All of the Kendall family except Peter's sister, MILICENT, wish Ann to marry Peter.

At a week-end party Ann is thrown from a horse. Although her injuries are not serious Peter is deeply alarmed.

A few days later, when Ann is convalescing, Valeria comes to see her. Valeria tells Ann that Peter's grandfather has cut him off in his will because of his marriage and indicates that Peter regrets the marriage.

Believing her love for Peter is hopeless, Ann runs away.

**NOW GO ON WITH THE STORY CHAPTER XXXI**

"YOUR office is calling, sir," the maid said timidly from the door. "Something important, they said."

Peter smiled grimly. Something important! "Susan, I'm shutting this place up for a while. I'll give you and Evans and Rose each a month's salary in advance."

"Yes, sir."

"Tell Evans to pack two large bags and send them to the club for me."

In the kitchen the three servants conversed in low tones. "It was like he had gone crazy," Susan said. "He stood there looking down at the letter, his hand shaking so he could hardly hold it and his face as white as that flour."

"Would you have believed it?" Rose shook her head. "Didn't know when she was well off—Mr. Peter so handsome and rich and doing on her own."

Peter was wondering where Ann had gone. "If Sarah's? To her former home in Greenfield? Then came the thought, plunging him into torment. She had gone to Tony's. The idea was like a thousand devils destroying him. If he didn't put it aside it would drive him mad.

He must get away from this place where Ann had been, where he had been building up hope after hope, where his love had grown until nothing else seemed worth while in life.

Haggard, wild-eyed, he caught the elevator, Evans had brought his car to the front. He got in, took the wheel and drove away from town.

A half hour later he drove up to front of the home he had purchased as a surprise for Ann. He had let the nurse into the secret and she had said Ann would be strong enough today to drive out. He had pictured Ann's excited eyes, her rapturous exclamations.

Perhaps after a while, he would sell the place. But not now. Not for a long while. He wondered if the time would ever come when he would be willing for anyone else to own Ann's home. He had planned it, even to the smallest details, with the thought of her happiness and comfort. He had pictured the soft, imported rugs here, beautiful draperies, the furniture, things she had chosen.

He went out, shutting the door, turning the key on his broken dream.

MRS. KENDALL had said to Millicent, "This family has had en-

## SIDE GLANCES By George Clark

"You should have some idea of how many children your sisters have."

Beauty Costs Should Be Budgeted

"Next year, instead of buying cosmetics in hit or miss fashion, I'm going to budget my beauty," a girl with a limited income told me during a discussion on New Year resolutions.

"I'm tired of buying products I don't use regularly. I'm going to figure out what I really must spend to be well-groomed and then I'm going to keep within that figure."

Her resolution seems to me to be a worthwhile one for any beauty-minded woman to make come January first. Of course, everyone needs the basic preparations and perhaps one special one to correct a particular condition. But there just isn't much use in getting dozens of bottles and jars that not only clutter up your dressing table but have no real value.

Powder, rouge, lipstick, foundation lotion, hand lotion or cream and at least one good complexion cream are the necessities. If you have large pores, you probably need a good pore cream. If you manicure your own nails, get polish, polish and cuticle removers and a cuticle oil. Unless you use an expensive and special type, soap need not be counted in the beauty budget.

Decide how often you must visit a beauty salon and exactly what you can spend each time. If you can't afford scalp treatments and professional manicures, too, by all means get the necessary treatments and do your nails yourself. Remember hot oil is good for the scalp and hair and can be used at home even though you can't go out for shampoos and waves. Simply rub it on the night before your appointment.

**A BLADDER LAX**

Use Juniper Oil, Buchu Leaves, Etc. This 25c test free if it fails. If irregularity wakes you up, flush out impurities and excess acids. Get buchu leaves, juniper oil, etc. in little green tablets called Bulets, the bladder lax. Works on the bladder similar to castor oil on the bowels. Poorly acting bladder can cause disturbed sleep, frequent desire, scanty flow, burning or backache. In four days, if not pleased any drugist will refund your 25c. Get your regular sleep and feel "full of pep." Brant's Drug Store, John S. Gibson Drug Co.

"You're looking fearfully thin, Peter," Valeria was saying. "It's really wrong to let yourself go like this, shutting yourself away from all your friends."

"Don't worry about me, Val. I'll be all right."

"I am worried. How could I help it when I see—see," she hesitated and went on, "someone I care for suffering?"

Peter looked up at Valeria then. Her voice sounded as though she were going to cry. There were tears in her eyes.

He said uncomfortably, "It's foolish of you to worry about me."

Valeria followed up her advantage. "When I think of Ann hurting you like this—"

"Leave her name out," Peter said hoarsely. The stark misery in his eyes enraged Valeria. She hated Ann, who had put it there.

Peter had gone calmly about putting Valeria out of his mind when he had broken with her. But when Ann left, he had turned into a recluse. Everybody was talking about it. All Valeria's friends were smiling and saying, "Peter's positively sunk over his wife leaving him. Did you ever see anyone so completely gone?" Valeria isn't there anything you could do?"

She had used all her resources during the month, only to meet Peter's blank indifference.

"It's awful to be shut out like this," she said now. "I've been so lonely. I haven't been anywhere. I couldn't, worrying about you."

Paul Johnson looked up as Peter entered the office. "Peter, a call came for you. Someone wants you to come to this address on Bond Street. Where in the devil is Bond Street? Ever hear of it?"

## Plan For the Years

There are so many, many souls who go gallantly and tall to meet old age; many who pin courage over woe, and such a throng of silent ones who weep.

With heads held high, a war on doubts and fears; and, oh, so many bearing flags of song.

But, self, we must, in going down the years, refuse to be less brave and gay and strong!

And let us learn to keep an open mind, sense of humor, and a reverent soul.

And never be too busy to be kind—Playing so valiantly this strange new role.

That watching ones, who love their youth cut say, "I should not mind so, growing old that way!"—Selected.

Mr. and Mrs. Oral Reeves spent Christmas with Mrs. Reeves' parents, Mr. and Mrs. C. M. Armstrong and other relatives in Little Rock.

Mr. and Mrs. Ess White and son, Es Jr., formerly of this city, now of Jackson, Miss., are spending a few days with Mr. and Mrs. R. T. White and friends.

Mr. and Mrs. J. T. Crosby had as Christmas guests, Mrs. T. H. Duke of Scott, Chopley Duke of Little Rock, and Horace Duke of Foreman.

Mr. and Mrs. Dess Shannon and son, Thos. LeRoy Frazier and Corinne Shannon of San Antonio, Texas, are guests of the T. H. Goff family.

Mr. and Mrs. Joe Smith and family were Christmas guests of Mrs. Angie Wilson in Little Rock.

Mr. and Mrs. John Atkins of Little Rock were Christmas guests of Mr. Atkins' parents, Mr. and Mrs. W. S. Atkins.

Mr. and Mrs. J. A. Sullivan had as Wednesday dinner guests, Mr. and Mrs. Sam Sullivan of Houston, Texas, Mr. and Mrs. Ben Carter and family of Blue Bluff, Otho Sullivan of Little Rock and Mr. and Mrs. Jack Sullivan.

## Musical Program for Washington

Club to Present Musicale Washington Baptist Church Jan. 4

The Washington Music club will present a musical program at the Washington Baptist church Friday night, January 4. The program, opening song, directed by Lat Moses, KCMC quartet, by C. E. Hucklebee, Texarkana.

Musical reading, by Miss Katherine Holt.

Song by the choir, by Finis Johnson, Warren Sisters quartet, McCaskill.

Song by choir, Will Davis, Hope, Cornett and trombone duet, Ruel Oliver and T. R. Billingsley.

Hope quartet, by Claud Taylor, Piano Solo, Margaret Fruit.

Odum Brothers quartet, Patmos, Duet, by Vivian and Eva Beck.

Base Solo, by Austin Arnold, Nashville.

Song by Choir, L. F. Monroe: "Swing Low Sweet Chariot."

Mixed Choir, "All Hail Immanuel." Piano Solo, Mrs. Dale Jones.

Mandolin, by Dan Pilkinton. Violin, by Mary Sue Stingley.

Oakland Quartet. Trio arranged by Bobbie Nell Martin.

Other quartets will be added. Committee—Lat Moses, Katherine Holt, Norvel Kelly.

## Sister MARY'S KITCHEN

If you had roast turkey for Thanksgiving and roast pig for Christmas, how about roast duck for New Year's?

One advantage about a duck dinner is that there are seldom many leftovers. Any bits of meat remaining, though, will make delicious salad combined with celery and oranges, while good sized slices may be heated and served with a hot wild grape jelly sauce.

Here's the menu: Cocktail of Canadian Rhubarb, Roast Duck with Peanut Stuffing, Orange Sauce.

Rice Croquettes, Baked New Beets, New Cabbage, Salad of Mixed New Greens.

with Roquefort Cheese Dressing, New Year Pudding, Candies.

Coffee. Stew rhubarb without peeling in a small amount of water. Sweeten when removed from fire. Chill thoroughly and serve with a red maraschino cherry in each glass. A pound of rhubarb will make cocktail for eight persons.

A duck is prepared for roasting in exactly the same way as a turkey or chicken. It is served less well done than other fowl, although a domestic

Tomorrow's Menu: Breakfast: Baked winter pears, coreat cooked with raisins, cream, crisp toast, milk, coffee.

Luncheon: Creamed frizzled beef with potato chips, jellied tomato salad, cream cheese and gingerbread sandwiches, milk, tea.

Dinner: Baked beef liver, Italian spaghetti, creamed onions, head lettuce, raisin pie, milk, coffee.

duck may be as well done as you want it without offending culinary conventions.

After cleaning and wiping dry, inside and out, fill with Peanut Stuffing.

Three cups hot mashed potatoes, 1 cup soft stale bread crumbs, 1 cup chopped peanuts, 4 tablespoons minced celery, 2 tablespoons butter, 1 teaspoon salt, 1/2 teaspoon pepper, hot milk.

Combine dry ingredients. Add butter, melted, and enough hot milk to make quite moist.

Or if you prefer put three small onions, peeled but not sliced, inside duck. Steam for an hour and remove onions. Then fill the duck with peanut stuffing. Truss and put on rack in roaster. Rub over the outside with salt and pepper and dredge lightly with flour. Put in a hot oven (400 degrees F.) for twenty minutes, basting every ten minutes with 4 tablespoons hot water and 1 tablespoon butter. Reduce heat to 350 degrees F. and roast for two hours longer, basting with the liquor in the roaster. Or put cover on roaster and roast without basting.

Orange Sauce: Three tablespoons butter or drippings of fat in roasting pan, 1 small carrot, 1 small onion, 1/2 teaspoon salt, 1/4 teaspoon pepper, 2 tablespoons flour, 1 cup water, 1 teaspoon sugar, 1/2 cup orange juice, 1 teaspoon lemon juice.

Add shredded carrot and onion to melted butter or other fat and cook, stirring occasionally until vegetables and butter are slightly browned. Stir in flour and when thoroughly blended, slowly add water, stirring constantly. Cook five minutes and pour through a fine sieve. Return to fire, season with salt, sugar and pepper and add orange juice and lemon juice. Heat but do not let boil and serve at once.

Serve duck on hot platter with garnish of orange cups filled with diced oranges.

Bake beets instead of boiling them in order to preserve their color. Roll in parsley butter and serve. Shred new cabbage and cook in water to barely cover until tender. Add enough sugar—about ten minutes. Add enough sour cream to cover cabbage and season with salt and pepper and butter. Let boil up well, add the juice of 1/2 lemon to 1/2 cup cream and serve.

Use French endive and chervil with just a touch of chives for the salad. Crumbled Roquefort cheese is stirred into a well-seasoned French dressing to make the Roquefort cheese dressing.

New Year Pudding: Five eggs, 1 cup granulated sugar, 2 tablespoons granulated gelatin, 1 1/2 cups grape juice, 1 cup blanched and shredded almonds, 1/4 pound candied

## Then, Perhaps, A Wedding!

NEW YORK.—While the rest of society was creeping to its perfumed bay, weak and droopy from another Christmas, the youngest and prettiest of the Goulds was busy at 4 a. m. Wednesday observing a fine old Gould family custom—contracting a striding and romantic marriage. It was one of those Harrison (N. Y.) elopements.

The exotic Anne, great granddaughter of the Jay Gould who spun a web of railway tracks and millions in the gaslet era, married Frank A. Meador, an actor unknown to Broadway, and a Texan, not found in the Social Register. In fact, Meador was scarcely known to Anne's parents, Mr. and Mrs. Jay Gould, when she took him to meet them and approve the acquaintance Wednesday afternoon at their apartment in Carlton House.

Anne gave her age as 23, and the bridegroom gave his as 25. He gave San Saba, Texas, as his home and Mrs. E. D. Estep as his mother's name. Meador attended the University of Texas. His occupation he wrote as "actor" while, surprising to her friends—Miss Gould gave her occupation as "actress." But this, the catty ones point out, may be a new name for aristocratic elegance indorsement of which Anne has done a great deal, and for dress modeling in swanky shops, which she also has done.

from them as much as possible. I go to the fights whenever I have a chance. In fact, I've known every heavyweight champion since John L. Sullivan.

"I like clothes that are comfortable. I don't like makeup, but if I have to wear it, I take pains to apply it well. I am very interested in art, music, and good books.

"If any of these qualities make me unusual—well, all I can say is that the rest of the world is cockeyed."

The young actress spoke the truth, all right. Barrymore does reek with common sense. Furthermore, he shows it. That's what makes him an unusual figure in Hollywood.

I know many persons here who have plenty of common sense. But, strangely enough, most of them try to hide that fact. They labor under the illusion that they'll get along better if they appear to be a bit eccentric.

Too Realistic For her role in "The Band Plays On," Betty Furness received a leather jacket which persisted in looking too new. She threw it on the ground and walked on it, but to no avail. Finally she spread it on her driveway and ran her car back and forth

over it. "She she went to the studio for an entirely new jacket. The gravel in her driveway had cut the leather into strips.

## RESERVE HEAD IN

(Continued from Page One)

banking act of 1933 which required the Federal Reserve Board from time to time to "limit by regulation the rate of interest which may be paid by member banks on time deposits." A precedent for the action, he said, was established on August 29, 1933.

Glass Replies LYNCHBURG, Va.—(A)—A statement by Marriner S. Eccles, governor of the Federal Reserve Board, denying that the board's order reducing time and savings interest rates of member banks was illegal, led Senator Glass to say Wednesday he could not understand why Governor Eccles "persisted in denying things that nobody has said."

"He evidently has not read my letter to Mr. Hamilton," Senator Glass repeated, "or, if he has, seems unable to understand it."

"I am perfectly familiar with the law under which the Federal Reserve Board took its action with reference to member banks since I drafted the provision, and there was no need in calling attention to it now because nobody has questioned legality of the Federal Reserve Board action under the law, but only the action of the Federal Deposit Insurance Corporation, for which there is no authorization of law."

"I am puzzled to find that the governor of the Federal Reserve Board seems unable to comprehend this."

U. S. INTERVENES IN (Continued from Page One)

51 Convex molding.  
52 Seed bags.  
53 Money changing.  
55 Measure of cloth.  
56 Wan.  
57. 58 He played a leading role in—

By HARRY GRAYSON

**BOSTON**—New England and New York is stirred up over the eastern racing situation, now that Massachusetts is in the legalized mutuels field.

The Bay State's entry is mighty significant. The nation's bangtail bonanzas of 1934—Narragansett in Rhode Island and Rockingham in New Hampshire—were fed by Massachusetts money.

The New England galloping gold strike, productive of the nation's richest turf yields for two years, will produce little more than a trickle of profit henceforth, authorities are saying.

The belief is that the entry of Massachusetts not only will stem the flow to Narragansett and Rockingham, but will cut these tracks with their amazing mutual figures to the size of pony plants which are showing only a normal pulse.

When the beagle business will pitch its tent in the old Bay State isn't important to the multiple Midases of New England racing. Lou Smith, of Rockingham and Houston, Texas, and Walter E. O'Hara, of Narragansett. Neither needs any great amount of intuition to realize that their record handles, sprees of betting, and wild crashes at mutual windows are dizzy days to look back upon with sizable sighs.

For Massachusetts went for the thoroughbred—and the dogs—at the polls a few weeks ago like it went for Alfred Emanuel Smith.

**Turf's Best Friends Are Dogs**

The Massachusetts Racing Commission has before it the applications of nearly a dozen turf interests and thrice that number of dog racing profit seekers, including Judge Emil Fuchs, owner of the Boston Nationals, who precipitated a baseball row by suggesting that the bowwows be permitted to bark at Braves' Field.

Rockingham, some 20 miles from Boston, capital of a state which never before had known horse racing, depended upon Massachusetts for nearly 70 per cent of its patronage.

Narragansett, 40 more miles distant to the south, found that Massachusetts contributed an attendance that equaled that of Connecticut and Rhode Island combined.

Now, with Massachusetts in the field, its oval, which assuredly will be in the eastern section, is in the most advantageous spot—between the other two.

Oddly enough, the salvation of Narragansett and Rockingham may be the sport that sho' nuff hossmen despise most—dog racing. Neither Rudy nor New Hampshire laws provide for operation of or betting on canine competition.

**Just Crazy About Horses**

If dog racing speedways spring up as rapidly as have the applications, their presence will affect horse racing to a considerable extent. If the allegiance of the wagering public is wheeled over to the purps, it is only reasonable to assume that the Massachusetts horse track, or tracks, will be unable to cope with their contemporaries—will hardly measure up to the Rhode Island and New Hampshire wheels, where lure and interest are concentrated on nags in exclusive locations.

Coin remained in sugar jars in New England—all of places, as its 1830 A. D. Puritan forbears would say—until it went crazy about horses. In 59 days at Narragansett, \$23,106,262 passed through the windows. Rockingham's summer and fall meetings enjoyed mutual handles exceeding \$20,000,000. Each establishment showed a net profit of more than \$1,000,000.

Narragansett's record day may be cited, if only to give California and Florida some prosperity news. On Monday, November 12—when an Armistice Day celebration was extended to create a holiday—56,102 people stormed the park, commencing at noon. When 35,000 programs were sold before 1 o'clock, \$5 bills were offered for copies. The day's handle was \$748,502. Of this figure, \$131,008 was wagered on a single race, for what Gansett officials declare is a national record.

The Boston Braves are going to the dogs for more reasons than this is winter in ol' New England and the frost is on the pumpkin.

Japan has more than 635,400 miles of roads, ranking third in this respect among nations of the world.
